Structured Products: Principles for Managing the Distributor-Individual Investor Relationship

The distributor-individual investor relationship should deliver fair treatment of the individual investor. Individual investors need to take responsibility for their investment goals and to stay informed about the risks and rewards of their investments. Distributors can play a key role in helping them achieve these objectives. In this document, an "investor" means a retail investor who is not an institution, a professional, or a sophisticated investor, and a "distributor" refers to any institution or entity that markets or sells retail structured products directly to an individual investor. This will include an issuer of a retail structured product that markets or sells the same directly to individual investors.

In light of the increased interest in structured products as part of individual investors' investment and asset allocation strategies, it is important for firms to keep these principles in mind in their dealings with individual investors in structured products. These principles complement and should be read in conjunction with our recently released, "Retail Structured Products: Principles for Managing the Provider-Distributor Relationship," available at the websites of the five sponsoring associations¹, which focus on the relationship between manufacturers and distributors. These principles apply to the relationship between the distributor and the individual investor.

Although these principles are non-binding (being intended primarily to help inform firms' thinking) and do not create enforceable obligations or duties, firms involved in the distribution of structured products to individual investors are encouraged to reflect these principles in their policies and procedures. Further, each firm is encouraged, given differing regulatory environments and both cultural and client base differences, to consider the extent to which the firm should adapt these principles to its particular

circumstances. As stated in the related Provider-Distributor Relationship Principles noted above (Principle 7), “no party takes on the regulatory obligations of another or the oversight of that other party’s compliance with those obligations.”.

For the avoidance of doubt, these principles are intended primarily to apply in the context where structured products are actively marketed and/or recommended by distributors to individual investors, and not where distributors are merely executing transactions for investors on a non-advised, non-discretionary basis. Where distributors are executing on this basis, those parts of these principles that are not appropriate to such relationships (for example, those relating to secondary market making and client appropriateness and suitability) shall not apply.

Overview

The term "structured products" refers to a variety of financial instruments that combine various cash assets and/or derivatives to provide a particular risk/reward profile that allows investors access to broader investment opportunities. The return of a structured product is usually derived from the performance of one or more underlying assets. Examples of underlying assets include, but are not limited to: interest rates; a particular equity or debt instrument; a basket of securities; a securities index or indices; an individual commodity or commodities; a commodities index; an individual currency or currency basket; creditworthiness of a security or basket of securities; or any combination thereof.

Some structured products offer full or partial principal protection, while others have no principal protection. Some offer a yield; others do not. It is possible that the value of an individual structured product may not increase as much as the underlying asset, or may decrease more than the underlying asset. Some structured products offer individual investors access to new asset classes that may otherwise be difficult to access through other investment alternatives and which can help with portfolio diversification.

Structured products can be more or less risky than other investment products such as equities, fixed income products, or mutual funds: there is no necessary link between product complexity and investment risk - complex products may be low risk, and non-complex products may entail high risk. It is important that an investor understands the role in an investment strategy that can be played by any particular structured product in light of the investor’s specific investment objectives, risk tolerance, and investment horizons.

Principles

These Principles should be read in conjunction with the Overview and Introduction section set out above, which contains important overarching comments to the nature and scope of the Principles. Moreover, the Principles are to be taken collectively, rather than viewing any one Principle in isolation from the others.

1. Product Transparency

The party who is primarily responsible for the creation of marketing materials,² or is responsible for a prospectus, or other offering memorandum, should, to the extent permitted by applicable laws and regulations³, use reasonable efforts to ensure that the material features of the particular structured product are clearly articulated and delineated in such marketing materials or prospectus in a way that enables individual investors to evaluate the investment from a risk/reward perspective. Such party should also ensure that structured product descriptions in client materials and prospectuses are clear and not misleading. This will be helpful to both individual investors' and financial advisors'⁴ understanding of the product. Further, to the extent that a distributor is primarily responsible for the creation of marketing materials, such materials should be adapted to, and reflective of, the knowledge and sophistication of individual investors in the target market. For example, it should be clearly disclosed how returns on a structured product are linked to an underlying asset.

Marketing materials that are distributed to, or intended for distribution to, individual investors should be subject to review by the distributor's appropriate supervisory staff, as well as other internal processes, such as compliance or legal, as appropriate.

2. Risk Disclosure

Risk disclosure is important to an investor's understanding of structured products and should be made available to investors before a decision to invest is made. Investors should understand the risks inherent in the product before investing in it. Investors should be informed of the general types of risks associated with structured products, subject to individual regulatory standards as to the specific language required. Particular prominence should be given to any risk not usually associated with a given product, for example, risk of loss due to any sale of the product before maturity, as well as any material product-specific risk that may apply, such as risks arising from the underlying asset, liquidity and market risks in relation to the product itself, or specific tax

² The relationship between providers and distributors is specifically addressed in "Retail Structured Products: Principles for Managing the Provider-Distributor Relationship," Principle 5, Joint Trade Associations, July 2007.

³ In some jurisdictions, law and regulation may specify or limit the form, the content or the presentation of material which may be given to investors. These principles do not require such rules to be disregarded

⁴ "Financial advisor" refers to the firm's employees, or independent contractors, who interact directly with individual investors and who are registered to solicit trades and effect transactions. The formal term may vary significantly by firm and/or jurisdiction.

considerations. Where information on past performance is given, the presentation should be fair and not misleading, and, in particular, should acknowledge any limitations in available data.

3. Fees and Costs

Investors in a structured product should be informed of the existence of fees, costs, commissions, discounts, and any other sums paid to the distributor for acting as such over the life of that product. Distributors should have internal processes and controls in place to consider the appropriateness of fees and other incentives given local market conditions and regulatory requirements. A distributor's internal processes and controls should also consider the level of disclosure regarding such fees and costs in light of their possible impact on the secondary market of the structured product concerned.⁵

4. Potential Conflicts Management

Distributors should have internal processes and controls in place to consider potential conflicts issues and identify measures designed to mitigate, manage, or disclose material conflicts of interest arising from the sale of structured products. Such processes should, where necessary or appropriate, provide timely, adequate, and clear disclosure related to conflicts of interest or potential conflicts of interest that may exist or arise in connection with the distributor's sale of the structured product, or as a result of the business they conduct.

5. Credit Ratings

Credit ratings of issuers or, where applicable, guarantors, may not represent a rating of the potential investment performance of the individual structured product itself. Credit ratings, however, should be taken into account to the extent that it affects the terms of the product. If credit ratings are provided, the related disclosure should make clear the significance of the rating. Distributors should use credit ratings accordingly.

6. New Product Review

Distributors should understand the products they distribute. New structured products, whether developed by the distributor or developed by a third-party provider or manufacturer, should be subject to the distributor's product review and assessment process. This process should take into account the nature of the new structured product, the target investors, and an assessment as to whether the product is appropriate for its intended target market. Distributors should also have a process for determining what generally constitutes a "new product." It is not sufficient for a distributor to accept a third-party manufacturer's assessment regarding appropriateness of structured products for individual investors who are ultimately customers of the distributor and not the manufacturer. Distributing firms should conduct an independent assessment.

⁵ Insofar as a secondary market exists for the product. See Principle 7.

7. Liquidity/Secondary Market

Investors should be informed before investing of the likelihood of their being able to sell a particular structured product prior to maturity, and of the ways in which this might be done. Any secondary market to be provided by the distributor itself or through an exchange, or otherwise, should be disclosed. If there is little likelihood of such sale or other liquidation being possible, that fact should be clearly disclosed. Investors should be made aware that sales in the secondary markets, even where possible, may be at prices that are below the amount payable on the product at maturity, the original offering price, or the price at which they acquired the product. In addition, distributors should make a clear distinction between an investment in the structured product and a direct investment in the underlying asset, and that the return on the structured product may not reflect the return of a direct investment in the underlying asset, noting in particular that these respective returns may not necessarily move in tandem. For principal-protected products, it should be made clear to investors that the principal protection applies only at maturity, and the costs of unwinding the product mean that an earlier redemption value may differ materially from the potential value at maturity.

7a Client Valuations

Structured products should be valued on a regular basis and disclosed to the investor through the distributor's normal client statement process or otherwise.

8. Client Appropriateness and Suitability

Where a firm actively markets a particular product, as opposed to merely executing transactions on clients' instructions, it should determine which particular types of clients the product could properly be sold to (appropriateness) and may also be required to determine whether the particular product is right for a particular client (suitability). Methodologies and standards for making these determinations should be developed by the distributor and adequately communicated to the distributor's financial advisors. Liquid net worth, degree of sophistication, risk profile, age, and investment experience are several variables that may be relevant to such an assessment. Also, financial advisors should consider how a specific structured product would fit into an individual's portfolio. These standards should be reviewed periodically and amended, as needed.

9. Financial Advisor and Supervisor Training

Structured products vary a great deal as to their terms, risk/reward profile, liquidity/availability of a secondary market, underlying asset, and a variety of other factors. As such, it is important that financial advisors interacting with individual investors have an adequate understanding of structured products in general as well as an understanding of the characteristics of the individual structured products being offered. The financial advisor should be able to clearly explain the product's features to an individual investor. Distributors should provide their financial advisors with the

necessary training, or access to training, in structured products, including both the benefits and risks of the products, and should consider providing educational materials on structured products generally, in a suitable form (including one-on-one meetings, written materials, class-based training, desktop training, or other forms, as appropriate). Such training should also be provided to those responsible for supervising financial advisors.

10. Oversight and Compliance

Structured product sales to individual investors should be subject to the distributor's internal legal, compliance, and supervisory review processes, policies, and procedures. Distributors should have such supervisory procedures in place covering transactions in structured products, which should involve supervisory staff of appropriate seniority in light of the nature of the particular product and investor target market. Supervisory responsibilities may encompass sales practices, reasonableness of profit/loss potential, fees, and adequacy of training. Managers performing such supervision should have access to appropriate legal and compliance department support.

11. Tax Implications

Investments in structured products may have tax consequences for individual investors depending on their personal circumstances and jurisdiction of residence. Although certain tax implications may be highlighted in product documents, investors should be encouraged to discuss the specific tax implications of structured products with their accountant, tax attorney, or other tax professional.

12. Post-Trade Follow-up/Product Life Cycle Issues

Distributors should provide financial advisors with the necessary information to help their clients monitor performance of any structured product in which they have invested, and provide access to information regarding the terms of that structured product, including its maturity, pay-out details, secondary market price,⁶ and other pertinent information.

⁶ Insofar as a secondary market exists for the product. See Principle 7.
