

2024-2025 Working Group Sustainability-Linked Bonds Terms of Reference

Working Group Coordinators:

- J.P. Morgan
- Natixis
- PIMCO

Overall Objective

The intention of the SLB WG is to monitor market developments in the SLB market and further refine and update market guidance where necessary. The WG will continue to feed the KPI registry¹ on additional themes.

Objectives for 2024-2025

1. Provide the market with new toolkits

- Finalise the Sustainability-Linked Bond Market Review ‘White paper’ (this workstream was started during the 2023-2024 work period and is intended to present a review of the SLB market to date.
- Organise an online ‘ask the expert’ teach-in workshop on the SLB market (repeated for US/EMEA/APAC time zones) for market participants – expert panel to include a mix of issuers/investors/arrangers.
- Map emerging ‘SLB-adjacent’ instruments, such as the World Bank outcome bond series, and alternative adjustment mechanisms observed on the market.
- Should an Investor/Issuer survey is undertaken during 2024-2025, which reveals substantive issues requiring input from the SLB WG, consider presenting additional proposals to ExCom for approval.

2. Maintaining up to date the existing guidance

- continue to identify relevant KPIs and calculation methodologies to update the Registry (e.g., on social or nature-related issues).
- update the Q&A guidance², if substantive additional questions emerge following consultation with the original working group (co-ordinators to determine what constitutes ‘substantive’).

3. Regulatory advocacy

- Engage further thoughts & dialogue with the regulators.

Membership

The working group is open to all Members & Observers (including NGOs, rating agencies, technical advisors, or consultants).
