

DLT regulatory directory

Policy makers and regulators across Europe continue to provide legal clarity on the use of distributed ledger technology (DLT) within financial markets. The Luxembourg Government [submitted](#) (27 July 2020) its draft bill n°7637 to Parliament, to recognise the possibility of using electronic recording systems (including DLT) for issuance or conversion of dematerialised securities. The German Federal Ministry of Finance [published](#) (11 August 2020) its draft law on the introduction of electronic securities, addressing the modernisation of paper-based documentation requirements with the ability to store securities in a digital register such as blockchain. Most recently, the Swiss Council of States [approved](#) Bill 19.074 (10 September 2020) which aims to remove obstacles on DLT applications and limit the risk of abuse.

These developments, along with the European Commission's [communication](#) on its Digital Finance Strategy and legislative proposals on crypto-assets and DLT (24 September 2020), can be found within ICMA's updated [DLT regulatory directory](#). The directory was initially published in December 2019 and seeks to provide a non-exhaustive overview of recent DLT regulatory guidance, legislative initiatives, as well as related strategy papers and publications in selected jurisdictions across Europe, North America, and Asia-Pacific.
